The eArchiving website

eArchiving Initiative

The eArchiving Initiative provides core specifications, software, training and knowledge to help people store information for longer.

What is eArchiving?

Important information should be kept accessible and reusable for years to come, regardless of the system used to store it. **eArchiving provides core specifications, software, training and knowledge** to help people preserve and reuse information over the long-term.

Interoperability by default

Following international standards and specifications for packaging digital information enables organisations to transmit documents and information across borders. It also supports the storage, access and reuse of information regardless of the platform used.

Openness and transparency

Having a common set of open specifications for packaging and archiving digital information, promotes a high level of transparency and confidence among all participants in the information lifecycle.

Support Services

Miguel Umlauff (Gabinete, Spain)

Go here first! support@e-ark-foundation.eu

The eArchiving Support desk

The [eArchiving support desk](#) is the primary contact point for institutions and organisations to whom we provide support regarding questions and requests related to the eArchiving specifications and components.

We offer the following services:

Support desk provision

The support desk is set up to address issues, questions, and feedback that organisations and institutions might have related with any eArchiving service.

Onboarding service for new organisations

This service aims to assist and give guidance to organisations and institutions that want to implement or receive training in the eArchiving specifications and components.

You can contact us via email (support@e-ark-foundation.eu) for your questions, comments about eArchiving and advice on implementing, integrating and testing in your solution!

Check the [privacy statement](#) before sending your questions and comments.

Validation and Conformance Services

Validation and Conformance

1. Validation

Validation is the process of **testing a single Information Package (IP)** file for conformance. You can start by verifying if individual information packages of your digital repository or archival solutions are valid by using the **Validation Service** to test if your information packages are conformant with E-ARK specifications.

Validation Service

2. Self-assessment conformance

eArchiving conformance of a digital archive or archiving solution includes **to meet the E-ARK requirements for ingest and processing of Information Packages**, in addition to the validation of a representative sample of information packages.

Self-Assessment

3. Conformance application review

A brief interview with the eArchiving Team is arranged to review the evidence provided and verify the implementation of E-ARK **requirements for ingest and processing of Information Packages**.

Apply for a Review

4. Seal

After successful review the **eArchiving Conformance Seal** is awarded by the European Commission.

- Do you have a use case or an example we could use?
- Do you need help to use the Reference Architecture?

Archiving by Design

This document was prepared for the [The European Archives Group \(EAG\)](#). It provides a definition of Archiving by Design. It also recommends that the concept of sustainable accessibility to information is the premise for a pan-European approach for the records management community and archives to address the challenges of digital trans

The eArchiving Stakeholders

The eArchiving Initiative is built upon shared knowledge and experiences, which are the basis for creating the eArchiving community and increasing capacity building within the various constituent organisations:

Data producers	Those entities that are, or expect to be in the future, directly or indirectly responsible for depositing content in a digital archive for long-term digital preservation, which guarantees that information remains available, have not changed over time and retains the legal value.	Guidance
Archives	Those entities that are, or expect to be, directly or indirectly responsible for the governance of a digital archive, which provides long-term digital preservation.	Guidance
Solution providers	Those entities that are, or expect to be in the future, providers of technology or services for digital archives or for data creators.	Guidance

E-ARK Software (not a hosting Service)

The screenshot shows the GitHub repository page for E-ARK Software. At the top, there is a navigation bar with links for Product, Solutions, Open Source, and Pricing, along with a search bar. The repository name "E-ARK Software" is prominently displayed, followed by a description: "Sample Software of the E-ARK Programme and eArchiving Building Block". It also shows 6 followers, a location in Europe, and a link to the project website. Below this, there are tabs for Overview, Repositories (21), Projects (1), Packages, and People (2). The "Pinned" section features two repositories: "py-eark-ip-validator" (Python, 2 stars, 2 forks) and "commons-ip" (Java, forked from keeps/commons-ip, 12 forks). The "Repositories" section is filtered to show public repositories, with a search bar and filters for Type, Language, and Sort. Three repositories are listed: "E-ARK-Software.github.io" (Public, updated yesterday), "py-eark-ip-validator" (Public, updated last week), and "commons-ip" (Public, updated 2 weeks ago, licensed under LGPL-3.0).

Training Services

Jaime Kaminski , Highbury R&D, Ireland

eArchiving - training and curriculum

eArchiving offers training resources to promote understanding of eArchiving services and simplify long-term access to information.

As digital records proliferate, organisations face increasing pressure to manage their digital archives to comply with statutory and business requirements. These digital archives play a vital role in safeguarding our records: national, regional and local; business and public; social, cultural and scientific; and personal.

To support organisations, the eArchiving Initiative provides specifications, tools and reference software based on international standards for describing, transmitting and preserving digital data.

eArchiving Training

The training will take the form of webinars, face-to-face training sessions and a library of standalone multilingual training resources. Training will target digital archiving skills encompassing short, medium and long-term preservation, concentrating on the E-ARK tools and standards.

Take a look and get the materials of the eArchiving training sessions on the [eArchiving webinars website](#) and the [recordings of the past](#) sessions to know more.

eArchiving Curriculum

The academic curriculum will complement the industry-based training, with the focus on Masters courses. The curriculum will be released and presented soon. Whether you are beginning your eArchiving journey or are a more advanced user, there is something here for you!

If you have any questions or comments about this page, or eArchiving in general, please visit the [eArchiving Initiative support desk](#).

Social Networks

The screenshot shows the LinkedIn profile for the E-ARK Consortium. The header features a banner with a red, grey, and black geometric design. The E-ARK logo, which includes a stylized red boat and the text 'E-ARK', is positioned on the left. Below the logo, the text 'E-ARK Consortium' is displayed in bold, with 'Listed group' underneath. To the right of the logo are icons for sharing, notifications, editing, and a menu. On the right side of the page, it indicates '739 members' and shows four member profile pictures followed by a circle containing the number '207'. A blue button labeled 'Invite connections' is visible, along with a 'Show all →' link.
