

Agenda: the SIARD Format – past, present, future

- What is SIARD?
- SIARD in the landscape of digital archiving
- The past – from SIARD 1.0 to SIARD 2.2
- The present – SIARD 2.2 and the DILCIS Board
- The future – GitHub format, bitemporal feature

Mr. Anders Bo Nielsen, Senior Adviser, Division of Digital Preservation, Danish National Archives, member of DILCIS Board

Software Independent Archival of Relational Databases

SIARD Format Specification

Name	SIARD-2.2 Format Specification
Category	Standard
Maturity level	Approved
Version	2.2
Status	Reviewed version
Approval date	2021-08-31
Issue date	2021-08-31
Replaces	SIARD-2.1.1
Prerequisite	None
Attachments	metadata.xsd
Languages	English, German (awaits translation), French (awaits translation), Italian (awaits translation)
Publisher / distributor	DILCIS Board, https://dilcis.eu/ Swiss Federal Archives, https://www.bar.admin.ch/

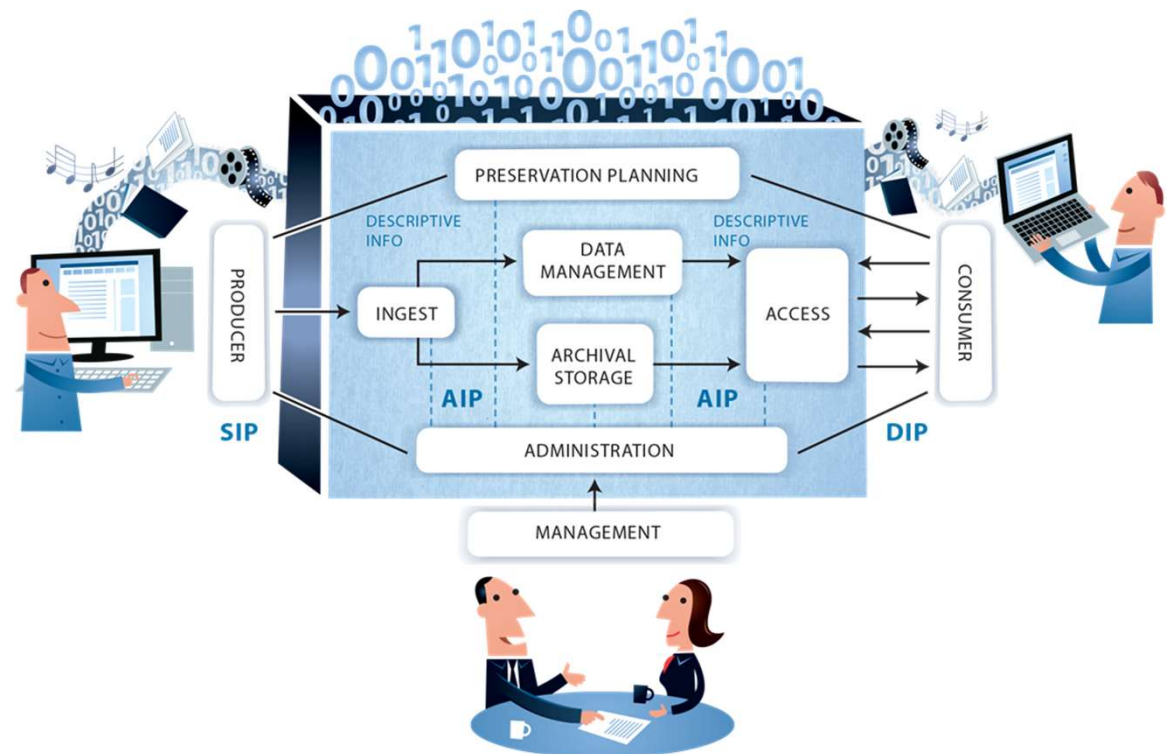

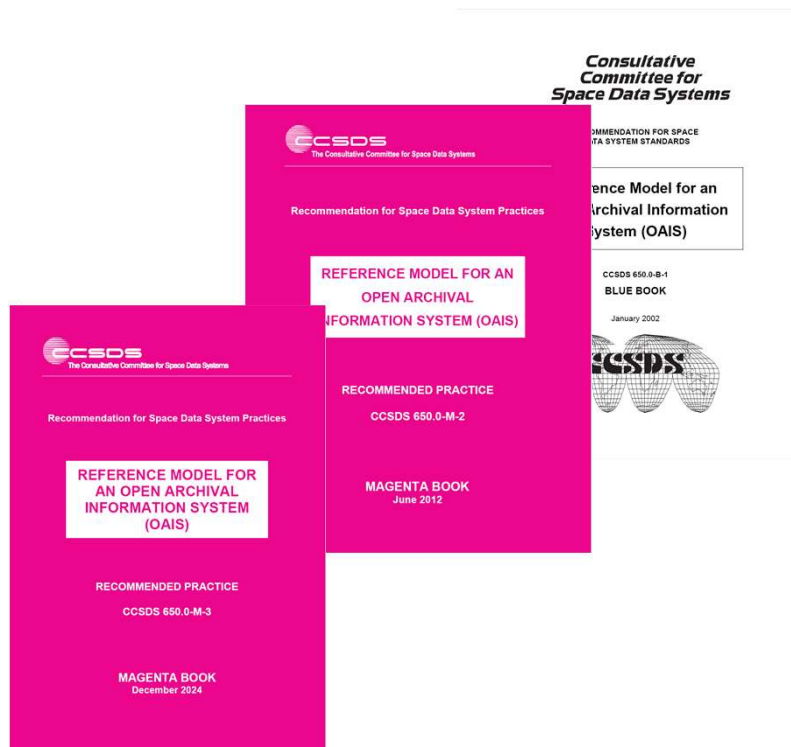

Summary

This document contains the specification for the SIARD file format version 2.2.
SIARD stands for Software Independent Archival of Relational Databases. The format version 1.0 was developed by the Swiss Federal Archives. It is a normative description of a file format for the long-term preservation of relational databases.
The SIARD format is based on standards including the ISO standards Unicode, XML, and SQL 2008, the URI Internet standard, and the industry standard ZIP. The aim of employing internationally recognised standards is to ensure the long-term preservation of, and access to, the widely used relational database model, as well as easy exchange of database content, independent of proprietary "dump" formats.

SIARD 2.2 <https://dilcis.eu/content-types/siard> <https://www.bar.admin.ch>

SIARD in the landscape of digital archiving

Packaging a SIARD file is outside the SIARD File Format Spec.

- A SIARD file is assumed to be archived as part of an IP
- *How it is packaged is deliberately not specified in the SIARD File Format Specification, but left to packing specifications like the CITS SIARD – it specifies how to package it in an E-ARK IP.*

Development of SIARD – the past

Development of SIARD – the present and the future

Present – why we still need SIARD

- The relational database (RDB) is still the most widespread and dominant form of organising structured digital information
 - in a later presentation we will hear about the challenges of archiving other types of databases
- Limited interoperability of proprietary RDBMS
- Proprietary SQL dialects despite ISO SQL
- Need for persistent data format outside the RDB Management System (RDBMS)

Present – DILCIS Board managing SIARD specifications

- The DILCIS Board has a tiny SIARD Working Group who receive issues regarding the interpretation of the SIARD file format specifications (all versions) and requests for new features – at <https://github.com/DILCISBoard/SIARD>

The screenshot shows the GitHub repository for SIARD (Software Independent Archiving of Relational Databases). The repository is managed by the DILCIS Board. The page displays the repository name, a description of SIARD, and a list of previous versions. The 'About' section describes SIARD as an open file format for the long-term archiving of relational databases. The 'Previous versions' section lists several versions, including SIARD 1.0, SIARD 2.0, SIARD 2.1, SIARD 2.2, and SIARD 2.2.2. The repository has 15 forks and 11 stars.

SIARD (Software Independent Archiving of Relational Databases)

The SIARD specification is an open file format for the long-term archiving of relational databases in the form of text data based on XML that is packaged in a container file.

The link to SIARD here to the right have been updated to contain no spaces (2024/05/17).

Future – SIARD 2.2 towards 2.3

- The SIARD Working Group of the DILCIS Board has the following plans for SIARD in 2025:
 - Solving more issues and faster
 - Reformatting the 2.2 specification from MS Word to GitHub Markdown to prepare for a new version.
 - Improving illustration and samples

Future – SIARD 2.3

- Seeking funding for creating a new version of SIARD
- Rewritten in English, German, French and Italian
- More samples
- New features, such as:
 - Support for temporal and bitemporal databases

Future – SIARD 2.3 – new features – temporal

- **Bitemporal Databases**
 - **Two time periods:**
 - application-time period
 - when something happened, is happening or will happen
 - system-time period
 - when the system *registered* something happened, is happening or will happen

Relational Database Archiving Interest Group

- The DILCIS Board and eArchiving Building Block initiated a “Relational Database Archiving Interest Group” which discuss and share best practices on database archiving, the use of the SIARD and SIARD CITS specifications, and related software.
- If you are interested in joining the mailing list, please register at:
<https://listserv.dilcis.eu/review/rdb-aig>
- and join as well the group where most discussions take place, namely the:
“International Database-Archiving Working Group”
that you will hear about in the next presentation
